Heavy Precipitation Outlook

Flash Flood Prediction Program

MOSTLY SUNNY & DRY TODAY

- A dry and subsident airmass arrives over Colorado Saturday, behind a departing trough of low pressure tracking E into the Missouri Valley. Mostly-sunny skies will help afternoon temperatures climb into the low 90s today, with breezy northerly winds at times.
- The atmosphere is too stable for showers or thunderstorms, but we might see a few fair-weather cumulus clouds drift off the higher terrain this afternoon.
- Mostly clear and mild tonight, with temperatures in the low 60s.

STORM RAINFALL POTENTIAL AND DURATION: No precipitation expected today or tonight.

A LOOK AHEAD: Dry NW flow aloft increases on Sunday, as the nose of the northern jet stream approaches Colorado. Temperatures will climb into the mid to upper 90s, with dry and sunny conditions continuing across the region.

MONITOR NATIONAL WEATHER SERVICE FOR SEVERE WEATHER STATEMENTS.
